

CONNECT

AED MONITORING SOFTWARE

The Connect server is a software application which ensures straightforward, remote, around-the-clock monitoring of CardiAct defibrillator cabinets and the AED stored within.

Accessible through secure access, from any computer connected to the Internet, the Connect server offers constant, remote monitoring of AEDs and their protective cabinets, providing users with realtime information concerning any incidents, alerts or malfunctions which may occur.

The following features and benefits of the Connect server are to be considered.

- 24/7 Access via Internet Portal
- User and password-protected access
- Multilingual
- Client terminal population control panel
- Colour code alert display
- Geolocalisation
- Customisable Actions and Alerts
- Events record (traceability)
- Email & Text Message Alerts (Incidents, Faults etc.)
- Configuration of users, groups of users and sub-accounts
- Photos taken of whoever removes AED or opens door
- Statistical data recovery (with export to Excel)

A CONFIGURATION AND MAINTENANCE TOOL

In addition to monitoring AED units, the Connect application is an easy-to-use online tool for the configuration and maintenance of these units. It has an online diagnostics capacity.

- Configuration can be modified from the server.
- An online diagnostics capability and interpretation by error code.
- Details of malfunctions and automatic routing of incidents (Emails/SMS wordings, recipients...).
- Record keeping of maintenance for each AED unit.
- Instructs as to preventative action needing to be taken. (keeping users informed of any expiration of Pads and Batteries, serial numbers...)
