

BLUE DETECTABLE PLASTERS

✓ MDD Compliant

A-Care Blue Detectable Dressings are an economy, hypo-allergenic product that provides an effective solution for all types of wounds. These plasters are recommended for the treatment of injuries in the food manufacturing and processing sector. They are specifically designed for environments where handling food is routine and where contamination is a risk. A-Care Blue Detectable Dressings are highly visible due to their vibrant blue colour, which is the only colour that doesn't occur naturally in food. They can also be detected by metal detection equipment for an added level of safety. These assorted dressings are strong and secure and can withstand regular hand washing to protect the injured wound area, preventing cross-contamination with food products. The dressings stretch, bend and flex to maintain maximum adhesion, meaning lifting and edge curling are prevented.

AVAILABLE IN:
