

CPR FACE SHIELD

- ✓ MDD Compliant
- ✓ UKCA Marked & CE Marked

When treating sudden cardiac arrest, our AeroShield™ CPR Face Shield can be clipped onto a keychain or belt thanks to its keyring pouch design. The simple keyring design means easy access to the AeroShield™ CPR Face Shield is available at all times, especially if it is clipped onto a belt or bag that is always carried. The pouch is sturdy and supports the AeroShield™ CPR Face Shield. It can be accessed by lifting the Velcro flap in order to retrieve the face shield. This product has been produced to carry the AeroShield™ CPR Face Shield. An essential for any first kit, the face shield offers protection for those administering mouth-to-mouth during the CPR process, either whilst a defibrillator is being retrieved or in the absence of a defibrillator. The face shield is sturdy, meaning there is a protective barrier at all times. This is essential, especially when there are hazardous bodily fluids around the mouth. Individual packs contain one AeroShield™ CPR Face Shield.
