

THERMAL EMERGENCY FOIL BLANKETS

- ✓ MDD Compliant
- ✓ UKCA Marked & CE Marked

The AeroRescue™ Thermal Emergency Blanket provides effective protection for the casualty against heat and cold exposure. Reflecting up to 80% of body heat, it assists a casualty with keeping warm when either hypothermia has started or in response to the body going into shock. This is essential to any and every first aid kit. Hypothermia can be caused by prolonged excessive exposure to cold temperatures, which makes them vital for treatment. After witnessing something traumatic or suffering from a severe injury or illness, shock can cause blood circulation to suddenly drop. It can be a life-critical condition as the casualty's organs stop receiving enough blood and oxygen. As part of their treatment, it is essential to keep the casualty warm and calm. The size of the AeroRescue™ Thermal Emergency Blanket is designed for both adult and paediatric use. Individual packs contain one AeroRescue™ Thermal Emergency Blanket, suitable for treating hypothermia or shock in casualties.

AVAILABLE IN:

- ✓ Protects against excessive heat or cold
- ✓ Premium quality
- ✓ Reflects up to 80% of body heat
