

Blue Detectable BANDAGES

Unique Latex-Free High-Performance Bandages

In any food production environment, you need a bandage that will stick and stay put every time. Many blue bandages use a simple plastic backing material to provide modest levels of protection, water resistance and durability. AeroPlast™ Detectable bandages are completely different. The use of a unique film backing material and latex free adhesive means that these bandages outperform others in the essential areas of adhesion, conformability and user comfort. Highly resistant to water, oil and grease that can cause lesser products to lift, the island wound pad with metal detectable strip completely seals the wound from bacteria whilst still allowing it to breathe. The overall result is a longer lasting, more durable bandage that works exactly as intended and can actually deliver measurable reductions in bandage usage within your workplace. Available in four sizes including fingertip and knuckle varieties. All bandages are individually wrapped and sterile.

Key features

- Ideal for the manufacturing and processing sector
- Bright blue
- Metal detection
- High level of adhesion
- Conformable
- Hypoallergenic adhesive (Latex-free)
- Waterproof
- Breathable
- Centralized wound pad
- Sterile
- Comprehensive range
